Products and Services

Hunting provides products and services to the world’s leading national, international energy companies and oil service companies enabling the extraction of oil and gas. Manufacturing and sales locations are located in the key energy producing regions of the world.

Proprietary Technology
Hunting owns and develops proprietary patented products with a full range of applications below the wellhead to drilling mud control, precision connections, well perforating, logging and intervention tools.

Geographic Footprint
In strategic locations around the world, Hunting owns and operates plants, properties and equipment employing people to serve to global customers with local services and products.

Health, Safety, Environment and Quality Assurance

Hunting is committed to working safely in an environmentally responsible manner. These principles are fully integrated within our Quality Management System that defines the company’s global operations.

Quality Assurance
It is essential that products and services provided by Hunting are designed and manufactured to conform to the agreed API, proprietary license, or other specification of the customer, meeting their needs and expectations the first time, every time.

Health, Safety and the Environment
Hunting is committed to achieving and maintaining the highest standards of safety for its employees, customers, suppliers and the public. Its Hunting business units consciously operate in a manner that includes environmental matters as an integral part of its business plan.

OCTG Managed Service Provision

Mill Sources
Integrated Services
Inventory Strength
Threading Support
Field Service
In addition to casing and tubing supply, Hunting can offer proprietary connection threadforms, dopefree technology, thread storage compounds, protectors and thread sealant.

Inventory Strength
Hunting has taken the strategic decision to invest heavily to create an OCTG inventory valued at over 70 million US dollars including both carbon and chrome materials in plain end and threaded condition, this stocks holding of active customers ensure a draw down standard stock item for immediate dispatch.

Given standard roll lead times between 6-8 months, this allows Hunting to respond quickly to changes in well design without cost penalties.

Full remanufacturing capability on an as needed basis ensures that waste from under project operations stocks are removed from the system, resulting in lower overall costs.

Flexible to match programme changes
• The full-length shaft allows for individual lengths and sizes to be supplied.
• Hunting can accommodate any changes to the well programme in real time.

Field Service
Hunting’s quality control does not just end with delivered product at the quayside – Hunting Field Service Technicians can assist with the final installation of tubulars on the vessel, ensuring the integrity of the pipe and connection properties.

Hunting’s OCTG business model has been built around two key principles to support customer operations; namely flexibility and responsiveness.
